

CHEM 1032  
**PRACTICE**  
**UNIT ASSESSMENT 4**

SECTION: \_\_\_\_\_

NAME: \_\_\_\_\_

TUID: 

--	--	--	--	--	--	--	--	--

**Before the Unit Assessment begins, read the rest of this page, and follow the instructions.**

---

**!!! Do not turn this page until given the signal to begin !!!**

---

**Put away everything besides pencil(s) and a scientific calculator.**

- Non-programmable (scientific) calculators are permitted. Graphing calculators **are not permitted** (such as these models: TI-83, TI-84, TI-89, Casio FX-9750).
- Any other electronic devices - including cell phones, smart phones, and smart watches - **are not permitted**. If you are not sure what is permitted, ask *before* the exam begins.

**When you are told to begin work, open the booklet and read the directions.**

A periodic table and other useful information can be found on the next page.

**Grading.** Each question is graded by your instructor using the scale below.

***1 - Excellent***

- The student demonstrates a deep understanding of concepts and problem-solving techniques.
- Calculations are clear and legibly written.
- Any mistakes are minor or careless errors that do not indicate a major conceptual misunderstanding.

***0.5 - Fair***

- The student demonstrates a partial understanding of concepts and techniques.
- Calculations are clear and legibly written but contain errors.
  - The student may have started out correctly but gone on a tangent or not finished the problem.
  - The student may have used pattern matching to answer a different, more familiar question instead.

***0 - Unsatisfactory/Incomplete***

- The student did not demonstrate an understanding of the problem or has minimal understanding.
- Calculations are unclear, missing, or incomplete.
  - The student may have written some appropriate formulas or diagrams, but nothing further.
  - The student may have done something entirely wrong.
  - The student may have written almost nothing or nothing at all.

**Unit Assessment Time: 50 minutes.**

**It is to your advantage to answer every question.**

---

**!!! Do not turn this page until given the signal to begin !!!**

---

### Units:

amu	atomic mass unit
atm	atmosphere
g	gram
h	hour
J	joule
K	kelvin
mmHg	unit of pressure
M	molarity
K	kelvin
L	liter
mol	mole
s	second

### Symbols:

<i>H</i>	enthalpy
<i>v</i>	frequency
<i>M</i>	molar mass
mol	mole
<i>P</i>	pressure
<i>t</i>	time
<i>T</i>	temperature
<i>V</i>	volume

### Constants:

<i>N<sub>A</sub></i>	Avogadro's number
<i>R</i>	ideal gas constant

### SI (Metric) Prefixes:

c	centi-
d	deci-
k	kilo-
m	milli-

---

**!!!! FOR CREDIT, BE CLEAR AND WRITE LEGIBLY !!!!**

---

Cerium is a useful element because it can easily switch between  $\text{Ce}^{4+}$  and  $\text{Ce}^{3+}$ . However, cerium oxide ( $\text{CeO}_2$ ) nanoparticles are incredibly dangerous if inhaled, causing oxidative stress in bronchial cells and causing damage to DNA in fibroblasts. Despite this,  $\text{CeO}_2$  nanoparticles are commonly used in industrial applications and found in catalytic converters to decrease emission of  $\text{NO}_x$  gases.

A reaction of interest is of  $\text{Ce}^{3+}$  with  $\text{Ag}^+$  to plate Ag, where the initial concentration of  $\text{Ce}^{3+}$  is 0.100 M.

**Part I – Multiple Choice Questions (1 pt each)**

*Excellent Answer = 1 pt*

*Fair Answer = 0.5 pts*

*Unsatisfactory Answer = 0 pts*

\_\_\_\_ 1. How would you best describe the cell?

- A. Represents a galvanic cell, with an  $E^\circ_{\text{cell}}$  of -0.90 V.
- B. Represents a galvanic cell, with an  $E^\circ_{\text{cell}}$  of +0.90 V.
- C. Represents an electrolytic cell, with an  $E^\circ_{\text{cell}}$  of -0.90 V.
- D. Represents an electrolytic cell, with an  $E^\circ_{\text{cell}}$  of +0.90 V.

\_\_\_\_ 2. What amperage (A) is required to plate 3.75 g of  $\text{Ag}_{(\text{s})}$  in 45 min?

- A. 3.35 A
- B. 2.70 A
- C. 1.24 A
- D. 74.5 A

\_\_\_\_ 3. Which condition would require the least amount of external voltage to plate  $\text{Ag}_{(\text{s})}$ ?

- A. 0.100 M  $\text{Ce}^{4+}$  and 0.001 M  $\text{Ag}^+$
- B. 0.100 M  $\text{Ce}^{4+}$  and 0.100 M  $\text{Ag}^+$
- C. 0.001 M  $\text{Ce}^{4+}$  and 0.100 M  $\text{Ag}^+$
- D. 1.000 M  $\text{Ce}^{4+}$  and 1.000 M  $\text{Ag}^+$

\_\_\_\_ 4. If the external voltage is set to exactly that required to plate Ag, will oxidation or reduction of water occur?

- A. Yes, reduction of water will occur.
- B. Yes, oxidation of water will occur.
- C. Yes, oxidation and reduction of water will occur.
- D. No, neither oxidation nor reduction of water will occur.

\_\_\_\_ 5. After 652 s the  $[\text{Ce}^{3+}]$  is measured to be 0.345 M. What is the average rate over this time?

- A. The average rate is  $3.76 \times 10^{-4}$  M/s.
  - B. The average rate is  $5.29 \times 10^{-4}$  M/s
  - C. An error has occurred, no  $\text{Ce}^{3+}$  is present at the start of the reaction.
  - D. An error has occurred, the concentration at 652 s is not possible.
-

**Part II – Open Answer Questions – See Page 1 for full grading details***Excellent Answer = 1 pt**Fair Answer = 0.5 pts**Unsatisfactory Answer = 0 pts*

A second reaction of interest is of  $\text{CeO}_2$  with divalent iron ( $\text{Fe}^{2+}$ ) which was studied to understand the kinetics of the reaction. At 25 °C, the value of  $k$  for the reaction is  $0.0507 \text{ s}^{-1}$ .

Experiment	Initial $[\text{Fe}^{2+}]$ (M)	Initial $\text{CeO}_2$ (g)	Initial Rate of Reaction (M/s)
1	$1.5 \times 10^{-5}$	2.5	$7.58 \times 10^{-7}$
2	$1.5 \times 10^{-5}$	5.0	$7.58 \times 10^{-7}$
3	$3.0 \times 10^{-5}$	5.0	$1.52 \times 10^{-6}$

6. Balance the redox reaction in acidic conditions.

*Show your work in this box.*

7. The reaction is 1<sup>st</sup> order with respect to  $\text{Fe}^{2+}$ . What is the order of  $\text{CeO}_2$ ? Explain and sketch a graph of  $\text{CeO}_2$  concentration vs time. *Be sure to label your axes.*

*Determine order here.....*

*Sketch graph here....*

8. Using Experiment 3, determine how long it would take for the concentration of  $\text{Fe}^{2+}$  to reach  $1.5 \times 10^{-5} \text{ M}$  ?

Show your work in this box.

WRITE TIME HERE →

9. If the temperature of the reaction were doubled, how would you expect the **rate**, **rate constant**, and **reaction order** to change? Explain below.

Circle one:

**Rate Increases**

**Rate Stays the Same**

**Rate Decreases**

Circle one:

**Rate Constant Increases**

**Rate Constant Stays the Same**

**Rate Constant Decreases**

Circle one:

**Reaction Order Increases**

**Reaction Order Stays the Same**

**Reaction Order Decreases**

Explain here....

10. Compare Reaction 1 (Ce with Ag) and Reaction 2 (Ce with Fe), what is the relationship between the  $\Delta G^\circ$  values?

*Explain your answer....*

**CIRCLE THE CORRECT  
RELATIONSHIP→**

$$\Delta G^\circ_{R1} > \Delta G^\circ_{R2} \quad \text{or} \quad \Delta G^\circ_{R1} = \Delta G^\circ_{R2} \quad \text{or} \quad \Delta G^\circ_{R1} < \Delta G^\circ_{R2}$$

## END OF EXAM

# !!! DON'T FORGET TO CHECK YOUR WORK !!!!

### Useful information:

$$1 \text{ atm} = 760 \text{ mmHg} \quad 1 \text{ mmHg} = 1 \text{ torr} \quad 0^\circ\text{C} = 273 \text{ K}$$

$$R = 8.314 \text{ J}/(\text{mol K}) = 0.08206 \text{ (L atm)}/(\text{mol K})$$

$$E_{\text{cell}} = E_{\text{cathode}} - E_{\text{anode}}$$

$$\Delta G^\circ = -nFE_{\text{cell}}^\circ$$

$$F = 96,485 \text{ C/mol e}^-$$

$$E_{\text{cell}}^\circ = \frac{0.0592 \text{ V}}{n} \log K \quad (\text{at } T = 25^\circ\text{C})$$

$$E_{\text{cell}} = E_{\text{cell}}^\circ - \frac{0.0592 \text{ V}}{n} \log Q \quad (\text{at } T = 25^\circ\text{C})$$

$$[A] = -kt + [A]_0$$

$$t_{1/2} = \frac{[A]_0}{2k}$$

$$\ln[A]_t = -kt + \ln[A]_0$$

$$t_{1/2} = \frac{0.693}{k}$$

$$\frac{1}{[A]_t} = kt + \frac{1}{[A]_0}$$

$$t_{1/2} = \frac{1}{k[A]_0}$$

$$k = Ae^{-E_a/RT}$$

$$\ln k = -\frac{E_a}{R} \left( \frac{1}{T} \right) + \ln A$$

$$\ln \left( \frac{k_2}{k_1} \right) = -\frac{E_a}{R} \left[ \frac{1}{T_2} - \frac{1}{T_1} \right]$$

Half-Reaction	$E^\circ$ (V)
$\text{F}_2(g) + 2 \text{e}^- \rightarrow 2 \text{F}^-(aq)$	+2.866
